ARGONICS
ENGINEERED POLYURETHANE

*The latest and best
in mixer drum liners*

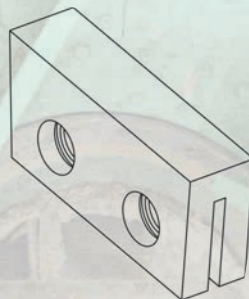

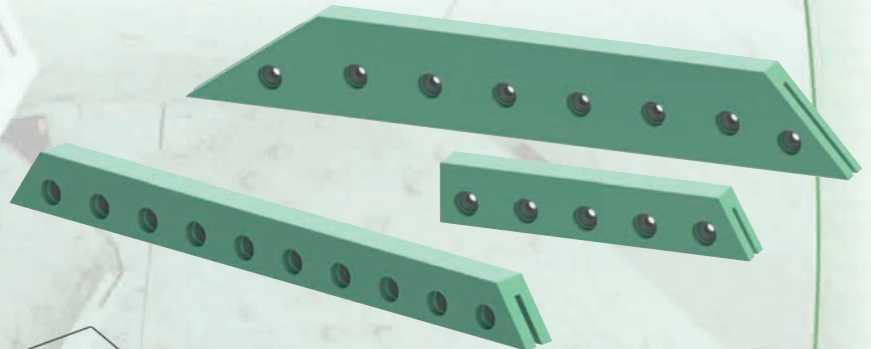

EVOLUTION™
WRAP-AROUND BLADE LINERS

The blade liners are made from the same material as the Evolution liner, so they have the same wear properties and use the same Snap-Tite plugs.

BENEFITS OF THE WRAP-AROUND BLADE LINERS:

- Prevents concrete migration underneath the liner
- Eliminates the need for steel flat bar edge protection
- Less concrete build-up means the drum is easier to clean
- Significantly longer wear life
- Less installation labor vs. current, non-wrapping design
- Increased wear life on blade tips
- If the edge tip wears out, you can replace just that piece instead of the entire blade liner
- Available for all major mixer manufacturers' drums
- Custom liners also available

EVOLUTION™

The best-performing liner ever created.

BENEFITS:

- Guaranteed 100% not to delaminate*
- Unique Kryptane® formula and manufacturing process
- Improved weld plate-to-urethane bonding
- Five year or one million yard warranty
- Originators of the Snap-Tite™ plug and weld-in liner
- The largest selection of liner sets on the market
- Established record of excellent performance
- Better than industry average lead times

Argonics is no stranger to innovation. Argonics is the leader in wet batch plant mixer liner design. Argonics created the first weld-in liner – now the industry standard with the Snap-Tite plug. We also created the dual-durometer liner that changed the industry.

As customer demands and expectations evolve, so must the products that they rely on. **Argonics is proud to provide the latest in a long line of products that strive for superior performance and reliability, the Kryptane Evolution.**

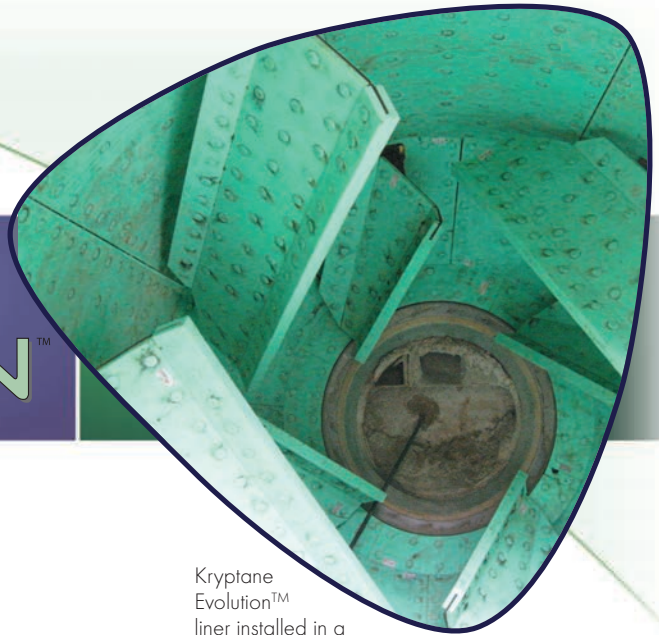

Argonics has raised the bar again with this new liner. The Evolution mixer drum liner features Argonics' unique Kryptane formula manufactured using an entirely new process. The Evolution liner uses more weld plates along the edges to reduce concrete penetration under the liner. And the new weld plate design is more securely anchored in the liner ensuring a stronger installation. Our Kryptane urethane offers outstanding wear and cut/tear resistance.

Argonics stands behind our Evolution mixer drum liners with a five year or one million yard warranty. These latest improvements give Argonics the ability to guarantee 100% that Evolution will not delaminate, ever. If any section of your liner delaminates within this time, that section will be replaced for free, guaranteed!

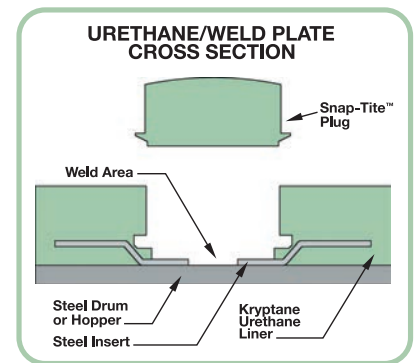

*Delamination is defined as a splitting or separating of the urethane into clear, distinct layers. All Argonics installation procedures must be followed as described in Polyurethane Lining Kits installation guide (lib-con-lin-03-01 revision 2). Argonics will not be responsible for incorrectly installed liners.

**Warranty applies to the drum liner only and does not apply to the blade liners.

The Argonics Nested Triangle logo, Kryptane and Kryptane Evolution are trademarks or registered trademarks of Argonics, Inc.

Kryptane Evolution™ liner installed in a 12 yard mixer drum.

The Evolution truly is the next logical step in mixer drum liners!
